

THE TRUE CEILING EDITION

GoalOS α -AGI Ascension

SOVEREIGN RESERVE Ω

INSTRUMENT 06

PROOF & VALIDATION PROTOCOLS

The institutional truth engine

Proof levels, Mission Contracts, Proof Debt, AGI Jobs, ProofBundles, Evidence
Dockets, independent review, challenge, and settlement readiness.

From Open-Ended Intelligence to Kardashev Type I Civilization

PROOF-GATED AUTONOMY • VERIFIED CAPABILITY • COMPOUNDING CAPACITY

FOUNDING RELEASE Ω -2.0 • JULY 2026

CONSTITUTIONAL POSITION

Mandate, Authority, and Boundary

The institutional truth engine

A model may answer. An agent may act. An institution must prove.

Purpose

Define the objects, proof levels, reviewer obligations, replay requirements, challenge procedures, and settlement-readiness conditions for autonomous work.

Authority

Controls how Mission Contracts, Proof Debt, AGI Jobs, ProofBundles, Evidence Dockets, validators, Chronicle, and graph commitments change claim status.

Boundary

A commitment, hash, vote count, model score, benchmark, or on-chain event does not establish truth, legality, safety, or unrestricted authority by itself.

No ProofBundle, no settlement. No required replay, no settlement. No Docket, no Chronicle admission.

OPERATING CONSTITUTION

Six Non-Negotiable Laws

The framework remains legible under speed, scale, novelty, and pressure.

Start with the objective

The mission contract freezes the decision, scope, criteria, risk, reviewers, and done condition.

Jobs retire proof debt

Work is created only for unresolved claims, contradictions, baselines, and required evidence.

Comparators are mandatory

Incumbent, neighbor, null, or strong alternative baselines prevent self-referential success.

Review is attributable

Competence, independence, conflicts, access, method, dissent, and limitations are recorded.

Claim states are explicit

Pass, conditional, blocked, rejected, disputed, stale, superseded, or withdrawn.

Negative evidence is valuable

A defensible hold, repair, scope reduction, rejection, or quarantine is a valid result.

INSTITUTIONAL MACHINERY

Objects, Lifecycle, and Decision Gates

The operating surface converts policy into attributable state transitions.

ProofBundle

Inputs, environment, method, outputs, traces, tests, receipts, failures, hashes, signatures.

Evidence Docket

Claims, provenance, baselines, contradictions, risks, replay, reviewer record, blocked claims.

Verifier Report

Scope, evidence inspected, replay, verdict, dissent, limitations, and next proof requirement.

Can a competent third party reconstruct what happened and distinguish supported, conditional, blocked, and rejected claims?

BOARD CONTROL

Metrics, Failure Modes, and the First 90 Days

Measure the institution by evidence, attributable value, and reversible authority.

BOARD METRICS

01

Claims with primary evidence and provenance

02

Reviewer-effective-independence score

03

Replay success and serialization consistency

04

False acceptance and blocked-claim leakage

PRINCIPAL FAILURE MODES

01

Rubber-stamp validation

02

Hidden human rescue

03

Synthetic evidence presented as executed proof

04

Hash inclusion mistaken for truth

FIRST 90 DAYS

Adopt proof levels L1-L5 • Freeze Docket schema • Recruit external reviewers • Run Proof Run 001

BOARD RESOLUTION: Adopt the Proof & Validation Protocols as the sole path from autonomous output to institutional authority.
