

THE TRUE CEILING EDITION

GoalOS α-AGI Ascension

SOVEREIGN RESERVE Ω

INSTRUMENT 01

FOUNDING CHARTER

Constitutional authority and reserved matters

Purpose, authority, role separation, admission law, emergency powers, rights, and the founding mandate.

From Open-Ended Intelligence to Kardashev Type I Civilization

PROOF-GATED AUTONOMY • VERIFIED CAPABILITY • COMPOUNDING CAPACITY

FOUNDING RELEASE Ω-2.0 • JULY 2026

FOUNDING PREAMBLE

Preserve only what deserves to compound.

The Reserve prevents abundant machine output from becoming unearned institutional power.

The institution may explore widely. It may remember, deploy, settle, or compound only through proof.

The opportunity

Open-ended machine intelligence may generate discoveries, methods, markets, software, scientific assets, and infrastructure designs faster than conventional institutions can evaluate them.

The constitutional response

GoalOS freezes scope, produces proof, preserves dissent, assigns rights, gates memory, and keeps every expansion reversible until evidence earns more authority.

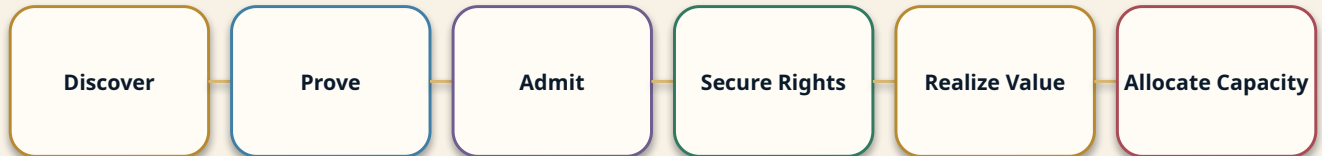

Sovereign Reserve Ω holds the small subset of proof-admitted, rights-bearing assets judged worthy of strategic stewardship.

ARTICLE I

Purpose and Founding Mandate

Convert verified invention into governed strategic capacity.

Mission

Convert open-ended machine intelligence into verified inventions; verified inventions into governed, rights-bearing assets; and realized value into stronger future invention.

Standard

No asset enters because it is persuasive, fashionable, novel, profitable-looking, or model-endorsed. It enters only through the recorded gates.

Boundary

The Reserve is not a protocol treasury, public investment fund, universal patent pool, prompt archive, or automatic deployment authority.

GoalOS creates proof. Sovereign Reserve Ω preserves proof-admitted strategic capability.

ARTICLE II

Constitutional Operating Laws

Every future privilege is earned by the next gate.

01 · No proof, no admission.

Candidate work remains outside durable authority.

02 · No rights, no capture.

Ownership, licence, reuse, confidentiality, and derivative rights must be explicit.

03 · No Mission 2, no compounding.

A fresh transfer test is required before reusable advantage may be claimed.

04 · No measured effect, no capacity claim.

Capital, compute, laboratory, energy, or infrastructure progress must be evidenced.

05 · No rollback, no release.

Every promoted capability retains an incumbent, kill condition, and recovery route.

06 · Search is not authority.

Novelty and opportunity scores guide attention; evidence decides outcomes.

ARTICLE III

Institutional Stack

One Reserve. Distinct authorities. No silent role collapse.

Search authority

Maps candidate opportunity, causal hypotheses, Proof Debt, and mission candidates. It cannot validate its own conclusions.

Execution authority

Sovereigns, AGI Businesses, agents, nodes, and routed providers conduct bounded work under a Mission Contract.

Admission authority

GoalOS packages proof; independent review challenges it; Chronicle decides future influence; the Reserve decides stewardship.

The model may propose. The mission may execute. The Docket may support. The institution decides.

ARTICLE IV

Authority and Decision Hierarchy

Lower layers cannot manufacture authority denied by higher ones.

- 1 Mandatory law and actual facts** Non-waivable obligations, real conduct, real control, real rights.
- 2 Founding Charter** Purpose, powers, boundaries, reserved matters, emergency law.
- 3 Portfolio Constitution** Asset definitions, gates, limits, dispositions, review standards.
- 4 Mission and rights instruments** Mission Contract, IP allocation, disclosure, reviewer route, canary.
- 5 Deterministic execution state** ProofBundles, Dockets, Chronicle decisions, graph roots, receipts.
- 6 Explanatory materials** Interfaces, papers, simulations, narratives, projections.

ARTICLE V

Roles, Duties, and Separation

Responsibility follows actual role, conduct, control, and authority.

Founding Board

Charter, reserved matters, portfolio limits, capacity policy.

Reserve Committee

Asset admission, disposition, freshness, conflicts, concentration.

GoalOS Operator

Mission orchestration, evidence packaging, Docket integrity, state export.

Independent Reviewers

Challenge claims, reproduce evidence, disclose conflicts, preserve dissent.

AGI Business

Mission ownership, rights acquisition, commercialization, deployment, retained value.

Safety & Reality Council

Canaries, monitoring, incident review, reality-gap evidence, shutdown.

ARTICLE VI

Founding Bodies and Reserved Matters

No single agent, model, key, committee, or operator may silently control the Reserve.

Founding Board

Approves the Charter, strategic domains, concentration limits, irreversible commitments, major rights transfers, and capacity mandates.

Reserve Committee

Admits, scopes, repairs, quarantines, supersedes, licences, retains, or retires assets.

Independent Councils

Review proof, safety, rights, effective independence, and reality-gap evidence. Dissent is preserved.

Reserved matters require explicit recorded approval

Charter amendment • material conflict waiver • unrestricted deployment • external transfer of strategic rights • capacity commitment above threshold • constitutional upgrade • emergency reactivation

Effective independence matters more than nominal headcount.

ARTICLE VII

Admission Constitution

An asset must satisfy six gates before Reserve authority attaches.

**Proof**

Primary artifacts, baselines, replay, contradiction, external or qualified review.

Authority

A valid Chronicle or equivalent admission decision with exact scope and freshness.

Rights

Enforceable ownership, licence, reuse, confidentiality, derivative, and publication position.

Safety

Risk class, excluded uses, canary, monitoring, rollback, incident and challenge routes.

Transfer

Fresh Mission 2 advantage under comparable constraints; no hidden human rescue.

Value

Attributable strategic, commercial, scientific, infrastructure, or capacity contribution.

ARTICLE VIII

Rights, Confidentiality, and the Public-Private Boundary

Proof may be public without publishing private intelligence.

Private intelligence

Prompts, methods, traces, customer data, source code, models, deal terms, keys, and sensitive capability remain encrypted, access-controlled, or off-chain.

Public proof state

Hashes, roots, attestations, policies, receipts, claims status, scope, freshness, revocation, and selective-disclosure proofs may be committed.

Private method

Evidence packet

Typed commitment

Chronicle authority

Bounded reuse

State is not authority. Inclusion is not truth. A commitment does not expand the admitted use envelope.

ARTICLE IX

Challenge, Emergency, and Rollback Powers

The Reserve must be able to stop faster than it can expand.

Challenge

Any material claim, validator route, rights position, root, deployment, or capacity effect may be challenged through an evidence-bearing process.

Emergency pause

Triggered by proof regression, key compromise, rights ambiguity, unsafe drift, correlated validator failure, hidden irreversibility, or external incident.

Rollback

Restore incumbent, suspend reuse, revoke root authority, preserve evidence, notify affected operators, and open a repair or retirement decision.

Minimum emergency packet

Trigger • affected assets and missions • key and operator state • proof snapshot
• rights status • interim controls • recovery test • reactivation gate

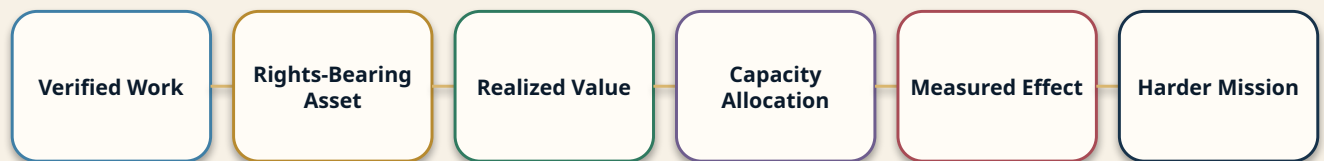

No reactivation without a fresh decision and evidence that the original failure is contained.

ARTICLE X

Economic and Capacity Mandate

The Reserve compounds governed productive capability - not narrative value.

Value ledger

Revenue, licence value, avoided cost, avoided risk, decision acceleration, IP, option value, and scientific contribution.

Capacity targets

Secure compute, AGI Nodes, validator diversity, data, laboratories, robotics, instruments, energy, infrastructure, and safety capacity.

Hard rule

No realized value may be represented by modeled benefit alone. No Type I progress may be represented without measured productive effect.

Allocate for future verified invention output per unit of capital, energy, coordination cost, and risk.

ARTICLE XI

Founding 180-Day Program

Prove one complete loop before scaling the institution.

0-30 · Constitute

Charter; Portfolio Constitution, rights matrix, safety law, first domains.

31-60 · Foundry

Candidate missions, agent organizations, evaluators, cryptoseals, baselines.

61-90 · Real Missions

Three paid or sponsored proof missions; one negative outcome permitted.

91-120 · First Asset

One externally replayed, Chronicle-admitted, rights-resolved asset.

121-150 · Realize Value

Licence, deploy, retain, partner, or form a venture; record attributable value.

151-180 · Allocate Capacity

Commit bounded realized value to one measurable capacity improvement.

FOUNDING RESOLUTION

Adopt the Charter. Nominate the first mandate.

The founding act is one bounded decision with one accountable sponsor and one independent challenge path.

One opportunity. One sponsor. One independent reviewer. One deadline. One rollback path.

Board resolution

Adopt this Charter as the controlling institutional mandate for Sovereign Reserve Ω and authorize the first proof packet.

First mandate

Nominate one consequential but reversible opportunity, freeze its Mission Contract and rights route, and let evidence decide whether it deserves Reserve consideration.
